

Sprint Report - CMPS 115 – GeoGuard

What things should we stop doing?

Overall the team did well but one issue was that some bugs occurred between the emulator tests and the physical tests. Since half the team used emulators and the other half used physical devices, I think the tests were inconsistent. Although not everyone has an android, the team should test stop using inconsistent methods for checking for errors so that random bugs don't occur only for some people.

What should we start doing?

I think some people were confused as to what technologies were being used. Creating a collaborative user document that lists what an individual was working on and the status would have been helpful for the team. Another helpful thing the team should start is commenting code more such that it is easier to understand for other team members.

What is working well that we should continue to do?

The team has consistently had good communication throughout the meet and has been punctual about showing up to meetings. There have only been minor disagreements between views on the project and that should be kept up. The share of work and the quality of the work has also been consistently high and the team will make efforts to continue to do this. Completion of the proper documentation has also been working and the team will continue to do so.

What work was completed, and not completed?

- Completed:
 - User Story: #1: As a user I want to have restricted passwords based on location.
 - User Story: #10: As a user, I want a quick and easy to use UI

- Not Completed:
 - User Story: #9: As a user, I want to have settings to edit my info
 - User Story: #13: As a user, I want to have a home base to access my data

What is our rate of completing work?

Of the 125 total points for the project, 55 were completed during the time of the Second sprint. We anticipated that about 40 hours of work would get done but in the end only about 40 were actually completed. We discovered that our projection of work was correct, but we just assigned too much even though we knew we couldn't complete it all. We were hoping for the best but instead only met out expectations.
